Simple Customization

Here are some examples of binding global keys in Emacs Lisp. Note that you cannot say `"\M-#"`; you must say `"\e#"`.

```
(global-set-key "\C-cg" 'goto-line)
(global-set-key "\e\C-r" 'isearch-backward-regexp)
(global-set-key "\e#" 'query-replace-regexp)
```

An example of setting a variable in Emacs Lisp:

```
(setq backup-by-copying-when-linked t)
```

Writing Commands

```
(defun ⟨command-name⟩ (⟨args⟩)
  "⟨documentation⟩"
  (interactive "⟨template⟩")
  ⟨body⟩)
```

An example:

```
(defun this-line-to-top-of-screen (line)
  "Reposition line point is on to the top of
the screen.  With ARG, put point on line ARG.
Negative counts from bottom."
  (interactive "P")
  (recenter (if (null line)
                0
              (prefix-numeric-value line))))
```

The argument to `interactive` is a string specifying how to get the arguments when the function is called interactively. Type `C-h f interactive` for more information.
